## Abstracts

According to our (Global Info Research) latest study, the global Home Energy Monitor market size was valued at USD 211.3 million in 2023 and is forecast to a readjusted size of USD 381.5 million by 2030 with a CAGR of 8.8% during review period.

A home energy monitor provides feedback on electrical energy use. Devices may also display cost of energy used, and estimates of greenhouse gas emissions. Various studies have shown a reduction in home energy use of 4-15% through use of home energy display.

Electricity use may be measured with an inductive clamp placed around the electric main, via the electric meter (either through an optical port, or by sensing the meters actions), by communicating with a smart meter, or by direct connection to the electrical system. The display portion may be remote from the measurement, communicating with the sensor using a cable, network, power line communications, or using radio. Online displays are also available which allow the user to use an internet connected display to show near real-time consumption.

Home Energy Monitor is mainly classified into the two types: solar ready type, non-solar ready type. Non-solar ready type is the most widely used type which takes up about 53% of the total sales volume in 2019.
