## Abstracts

A home microdermabrasion system is a device that allows individuals to perform microdermabrasion treatments on their skin at home. Microdermabrasion is a cosmetic procedure that exfoliates and removes the outer layer of dead skin cells, revealing smoother and brighter skin underneath. Home microdermabrasion systems typically use a handheld device with a rotating tip or abrasive surface to gently exfoliate the skin. These systems are often less powerful than professional microdermabrasion machines used in dermatologist offices, but can still provide noticeable improvements in skin texture and appearance.

According to our (Global Info Research) latest study, the global Home Microdermabrasion System market size was valued at US\$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
