Abstracts

The global Home Use Ovulation Rapid Test Kits market size is expected to reach \$ 285.1 million by 2029, rising at a market growth of 5.1% CAGR during the forecast period (2023-2029).

Ovulation tests or ovulation predictor kits (OPKs) are tests that allow users to predict ovulatory period. Ovulation tests work by detecting luteinizing hormone (LH). Just preceding ovulation, women experience an 'LH surge' - a sudden, dramatic, and brief rise in the level of luteinizing hormone.

Human Luteinizing hormone (LH) is a glycoprotein hormone secreted by the anterior pituitary. This hormone is composed of α and β subunits. The amino acid sequence of α -LH is essentially identical to that of other hormones including follicle stimulating hormone (FSH), thyroid stimulating hormone (TSH) and human Chorionic Gonadotropin (HCG).

In view of the characteristic variation of LH during the menstrual cycle, rapid and sensitive measurement of LH is an important tool in the diagnosis and management of infertility in females. Detection of the LH surge can aid in predicting the time of ovulation. The onset of the LH surge precedes ovulation by approximately 30 hours. The analysis of LH has been used successfully to time oocyte retrieval for in vitro fertilization and would similarly assist timing of artificial insemination.
