Honey is a sweet food produced by bees foraging nectar from flowers. Honey bees convert nectar to honey through regurgitation and evaporation. The bees store the honey as a primary food source in wax honeycombs inside beehives. The beekeepers extract the honey by removing the honey comb and then by crushing it or using a honey extractor. Honey bees form an important part of the food chain as they aid in pollination, which is required to support the food chain.

The industry's leading producers are Capilano Honey, Comvita and Dabur, with revenue ratios of 2.34%, 2.08% and 1.46% in 2019, respectively.
