According to our (Global Info Research) latest study, the global Honeycomb Seedling Tray Insert market size was valued at US\$ 146 million in 2024 and is forecast to a readjusted size of USD 205 million by 2031 with a CAGR of 5.0% during review period.

A honeycomb seedling tray insert is a tool for seedling cultivation, consisting of paper pots connected in a chain-like structure. The paper used in these pots is specially processed and, despite having no bottom, holds the soil securely within, thanks to the roots of the seedlings. This design facilitates easy transplanting as the entire paper pot, which is biodegradable, can be planted directly into the soil, reducing labor and minimizing transplant shock. Additionally, the paper material allows for efficient water and air exchange between the pots, promoting the growth of uniform seedlings.

Initially developed primarily for green onions, honeycomb seedling tray inserts have evolved to accommodate a broader range of crops. Versions with wider spacing between the pots are now available, making them suitable for leafy greens, flowers, and other plant varieties.
