According to our (Global Info Research) latest study, the global Honing Machine market size was valued at US\$ 360 million in 2025 and is forecast to a readjusted size of US\$ 448 million by 2032 with a CAGR of 3.0% during review period.

In 2025, global honing machine production reached approximately 12,500 units. Honing machine, also known as cylinder boring and honing machine, is a special high-precision equipment for inner hole finishing. It mainly utilizes the relative reciprocating rotary motion between honing stones and the inner hole surface of workpieces to perform honing, polishing, rounding and deburring processing on various cylindrical inner holes such as cylinders, hydraulic cylinders, sleeves and precision pipe fittings. The machine adopts vertical or horizontal structures and is divided into ordinary mechanical type and CNC servo intelligent type. It can effectively correct the roundness, cylindricity and surface roughness of inner holes, and improve the dimensional accuracy of aperture and the finish of inner wall. Widely applied in industries including automobile engines, engineering machinery, hydraulic and pneumatic components, aerospace, precision molds, oil pumps and fuel injectors, it serves as an indispensable core finishing equipment in the manufacturing and repairing processes of precision inner holes.
