Abstracts

According to our (Global Info Research) latest study, the global Hook Steel Fiber market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

The steel fiber market is growing as a result of high demand for infrastructure and construction. Steel fibers are used in these industries because they have properties such as excellent tensile strength, crack resistance, durability, corrosion resistance, and high shear strength. There are five types of steel fiber-hook steel fiber, crimped steel fiber, straight steel fiber, deformed steel fiber, etc. The hook-shaped steel fiber segment is expected to lead the entire steel fiber market. Hooked steel fibers are used for concrete reinforcement in hydraulic structures, paving of airports and highways, industrial floors, refractory concrete, bridge decks, sprayed concrete linings and explosion-proof structures. Hooked steel fibers greatly enhance the initial crack strength and provide post-crack strength. Hooked steel fibers form stronger joints, resulting in low maintenance costs for the structure.
