Abstracts

A horizontal carousel is a range of bins that rotate on an oval track. Every bin has shelves which are adjustable to 0.75' and can be configured for a myriad of special and standard applications. An operator directly inputs a bin number, part number or cell location and the carousel rotates through the shortest path. Multiple horizontal carousels integrating a pod of carousels, are set up with the pick-to-light technology and an inventory management software, for better order fulfillment.

Scope of the Report:

This report focuses on the Horizontal Carousel in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.

The lesser floor space requirement is estimated to be one of the major factors that have a positive impact on the growth of the market. Horizontal carousels need 50%-60% less floor space than a conventional shelving or racking layout design for similar products and volumes. The increased usage of horizontal carousels in the retail e-commerce operations serve as an effective solution for catering to the huge e-commerce orders. Also, the enclosed environments offered by carousels make them suitable for handling high-security items and due to its design to implement in a climate-controlled environment, they can be used for cold storage. These factors have led to the growth of the global horizontal carousel market during the forecast period.

EMEA is expected to be the major revenue contributor to the horizontal carousel market throughout the forecast period. Lack of manual labor availability and the need for specific automated material handling equipment for their functioning and speeding up their processes in industries will drive the growth of the industrial shelving market in the

region.

The worldwide market for Horizontal Carousel is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
