A Horizontal Decoiler is a type of metalworking equipment used to hold and feed a coil of metal strip, sheet, or plate through a processing line. The decoiler is designed to unwind the coil horizontally, allowing the material to be fed into various downstream machines such as press brakes, punch presses, or shearing machines for further processing. Its ability to efficiently and safely unwind coils of material ensures smooth and continuous operation of subsequent machinery, enhancing productivity and maintaining product quality. They are commonly used in industries such as automotive, construction, appliance manufacturing, and general metal fabrication, where metal sheets or strips need to be processed in large quantities.
