Abstracts

According to our (Global Info Research) latest study, the global Horizontal Dry Evaporators market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

In the horizontal dry evaporator, the liquid refrigerant enters the tube side from the end cover at one end of the evaporator after throttling. The end cover is cast with a partition, and the refrigerant evaporates through two or more processes and absorbs the heat of the refrigerant. After coming out of the same end cover, it enters the compressor. If the end cover diaphragm gasket leaks, it will short-circuit the refrigerant, resulting in liquid return and a decrease in refrigeration capacity. Horizontal dry evaporators are generally made of copper tubes, either bare tubes or inner finned tubes with longitudinal fins.
