Abstracts

The global Horizontal Dry Evaporators market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In the horizontal dry evaporator, the liquid refrigerant enters the tube side from the end cover at one end of the evaporator after throttling. The end cover is cast with a partition, and the refrigerant evaporates through two or more processes and absorbs the heat of the refrigerant. After coming out of the same end cover, it enters the compressor. If the end cover diaphragm gasket leaks, it will short-circuit the refrigerant, resulting in liquid return and a decrease in refrigeration capacity. Horizontal dry evaporators are generally made of copper tubes, either bare tubes or inner finned tubes with longitudinal fins.

This report studies the global Horizontal Dry Evaporators production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Horizontal Dry Evaporators, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
