Abstracts

According to our (Global Info Research) latest study, the global Horizontal Gel Systems market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Horizontal gel system is often used in research in life sciences and other fields. In horizontal gel electrophoresis, the gel is cast horizontally and submerged in running buffer inside the gel cassette. The gel cassette is divided into two compartments, separated by agarose gel. As mentioned earlier, the anode is on one end and the cathode is on the other. Ionophoresis buffers allow a charge gradient to be created when an electric current is applied.
