Abstracts

The global Horizontal Gel Systems market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Horizontal gel system is often used in research in life sciences and other fields. In horizontal gel electrophoresis, the gel is cast horizontally and submerged in running buffer inside the gel cassette. The gel cassette is divided into two compartments, separated by agarose gel. As mentioned earlier, the anode is on one end and the cathode is on the other. Ionophoresis buffers allow a charge gradient to be created when an electric current is applied.

This report studies the global Horizontal Gel Systems production, demand, key manufacturers, and key regions.
