## Abstracts

According to our (Global Info Research) latest study, the global Horizontal LPCVD market size was valued at USD 186.2 million in 2023 and is forecast to a readjusted size of USD 290.1 million by 2030 with a CAGR of 6.5% during review period.

Low pressure chemical vapor deposition (LPCVD) is a chemical vapor deposition technology that uses heat to initiate a reaction of a precursor gas on the solid substrate. This reaction at the surface is what forms the solid phase material. Low pressure (LP) is used to decrease any unwanted gas phase reactions, and also increases the uniformity across the substrate. As the name implies, chemical vapor deposition (CVD) is a process of depositing a solid film on the surface of a wafer through a chemical reaction of gas mixing, which is a technology often used in semiconductor manufacturing. CVD technology has the advantages of low deposition temperature (500 °C ~ 1100 °C), easy control of film composition and thickness, film thickness proportional to deposition time, good uniformity and repeatability, excellent step coverage, easy operation, and wide application range.

Global key players of Horizontal LPCVD include Shenzhen S.C, SVCS, Centrotherm, Tempres, Expertech, etc. The top five players hold a share over 58%. Asia-Pacific is the largest market, has a share about 88%.
