The global Horizontal NFT System market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Horizontal Nutrient Film Technique (NFT) System is a hydroponic cultivation method designed for growing plants horizontally, typically in long, narrow channels or troughs. In an NFT system, a thin film of nutrient-rich water continuously flows over the plant roots, providing essential nutrients while allowing the roots to absorb oxygen. This method promotes efficient nutrient uptake and is commonly used for cultivating various crops, including leafy greens and herbs, in a soil-less environment.
