The horizontal sander is a horizontal wet continuous production ultrafine particle disperser. Send the pre-mixed raw materials into the grinding tank of the main machine, and fill the grinding tank with an appropriate amount of grinding media, such as glass beads, which rotate at high speed through the dispersing blades, endow the grinding media with sufficient kinetic energy, and collide with the dispersed particles to generate shear force. To achieve the effect of dispersion, the dispersed material and the grinding media are separated and discharged through a special separation device. The horizontal conical sand mill is characterized by advanced design, closed continuous production, uniform grinding and dispersion fineness, good quality, high production efficiency, double-end mechanical seal, double protection, zero leakage, new dynamic separation mechanism, discharge More fun, widely used in coatings, dyes, inks, photosensitive materials, medicine and other industries. The horizontal sand mill is especially suitable for dispersing and grinding products with high viscosity and fine particle size.
