Abstracts

Horizontal Sewage Pump is a pumping device for discharging sewage and wastewater and is a single-stage, single-suction, cantilevered centrifugal sewage pump. It mainly consists of pump cover, pump casing, impeller, shaft seal, shaft, bracket and other components. The shaft seal adopts a new double-sided mechanical seal structure, and the pump and motor are mounted on a common chassis, which is directly driven by the motor through an elastic coupling. It is typically installed in a wastewater treatment facility or sewage well and is used to pump wastewater from a low point to a high point for entry into the wastewater treatment system or discharge to a wastewater treatment plant. Horizontal sewage pumps typically have a large capacity and corrosion resistance and are suitable for a variety of sewage treatment environments.
