The horizontal softening pot is a device that heats and softens the material in a rotating drum. The drum is equipped with several groups of heating pipes that rotate with the drum. The inner wall of the drum is welded with an inner spiral plate, and the drum is installed so that it is slightly tilted. The material enters from one end of the drum, and through the tilt of the drum and the rotation of the drum, the inner spiral plate drives the material to move forward while being heated and softened, and finally discharged from the other end of the drum.
