## Abstracts

The global Horizontal Split Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Horizontal split pump is a centrifugal pump designed with a split shell or casing. The casing is horizontally split along the shaft axis for easy access to the internal components of the pump for maintenance and repair. The split casing of a horizontal split pump includes an impeller and bearings installed on a horizontal shaft. The impeller is a rotating component designed to increase the velocity of the fluid as it passes through the pump, thereby increasing the pressure of the fluid. Bearings are designed to support the weight of rotating components and reduce friction between the rotating and fixed components of the pump.

This report studies the global Horizontal Split Pump production, demand, key manufacturers, and key regions.
