Horizontally Opposed Engine, also known as horizontally opposed cylinder engine or horizontally opposed plane engine, is a design form of an automobile or aircraft engine. The cylinders of this engine are arranged in pairs on the same level, and there is a certain interval between the opposite cylinders. In a boxer engine, the pistons at both ends of the cylinder work simultaneously, resulting in balanced operation. Boxer engines are usually four- or six-cylinder designs and are found in some brands of cars and airplanes.
