Abstracts

Hornbeams are small hardwood trees that belong to the Betulaceae family. They grow to a height of 15-25 meters and have a crooked fluted trunk. They are found in various parts of Western Asia and Europe and grow in almost any kind of soil. The leaves and bark of the hornbeam are used for medicinal purposes to treat and cure both internal as well as external health issues. An important constituent of hornbeam is tannin, which gives it effective antibiotic, astringent, and healing properties. The leaves of hornbeam have haemostatic properties that help in the quick healing of internal and external wounds and ulcerations. Hornbeams yield a very hard timber, giving rise to the name 'ironwood'. Dried heartwood billets are nearly white and are suitable for decorative use.
