According to our (Global Info Research) latest study, the global Horse Blood Products market size was valued at US\$ 172 million in 2025 and is forecast to a readjusted size of US\$ 258 million by 2032 with a CAGR of 6.2% during review period.

Horse blood products refer to biologics, bio-based raw materials, and related derivative products derived from whole blood, plasma, or purified blood components obtained from healthy adult horses through collection, separation, extraction, purification, and formulation processes. These products mainly include cell component-related products, normal horse serum, plasma proteins, normal immunoglobulins, and other functional bioactive components. They are widely used in biopharmaceutical production, cell culture, research reagents, laboratory materials, medical applications, veterinary applications, and other high-value downstream fields. In general, horse blood products are characterized by clear biological sources, diverse component composition, strong bioactivity, and multiple development pathways. The core value of this industry lies in the separation, purification, and productization of different components from equine whole blood, with commercial potential extending from basic raw materials and research reagents to higher-value functional products. The industry gross margin in 2025 is estimated at around 40%?65%, with relatively lower margins for basic raw-material products and relatively higher margins for purified proteins, research reagents, and functional products.
