According to our (Global Info Research) latest study, the global Hose Roller Pump market size was valued at US\$ 1556 million in 2025 and is forecast to a readjusted size of US\$ 2294 million by 2032 with a CAGR of 5.8% during review period.

Hose roller pump is a type of positive displacement pump used for pumping a variety of fluids.

Hygiene is a top priority in many industries including pharmaceuticals, food and beverages, cosmetics and chemicals. If the liquids used in these industries become contaminated, it can pose a health hazard and shorten the shelf life of the product. Therefore, to pump fluids in a hygienic and sterile environment, these industries use peristaltic pumps. The mechanical parts of the peristaltic pump do not come into contact with the fluid as the fluid is only passed through the tubing. Apart from this, peristaltic pumps are widely used for precise and accurate delivery of fluids, which is a major requirement of the above-mentioned industries. These factors are driving the demand for peristaltic pumps. Rising geriatric population and rising number of diseases have led to surge in demand for pharmaceuticals. The demand for peristaltic pumps market is expected to increase owing to the widespread use of peristaltic pumps in the pharmaceutical industry. In addition, the increase in disposable income is also driving the growth of the food and beverage, cosmetics industry. This also plays a major role in positively influencing the peristaltic pumps market size. Furthermore, chemicals are used across the industry for various purposes. Such as dyes for textiles, surfactants for detergents, silicon for the electronics industry, and other chemicals. This is expected to have a positive impact on the chemical industry; hence, increasing demand for peristaltic pumps market share.
