Hospital infection is categorized based on infection types into the following segments: blood stream infection (BSI) testing, urinary tract infection (UTI) testing, methicillin-resistant staphylococcus aureus (MRSA) testing, pneumonia testing, surgical site infection (SSI) testing & others infections such as cardio vascular infection, gastrointestinal infections & respiratory infections.

According to our (Global Info Research) latest study, the global Hospital Acquired Disease Testing market size was valued at USD 466.3 million in 2022 and is forecast to a readjusted size of USD 959.1 million by 2029 with a CAGR of 10.9% during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

One of the key factors driving industry growth is the rising geriatric population base. Advancing age of the geriatric population makes them more vulnerable and prone to diseases, thus increasing the demand for diagnosis. Other aspects supporting industry growth are growing demand of HAI diagnostics from middle and low-income countries such as India and Brazil, development of technologically advanced diagnostic products, rising awareness among healthcare workers, and initiatives taken by governments to counter the prevalence of HAIs. However, decreasing prevalence of nosocomial infections in the developed countries owing to improved healthcare infrastructure and rising awareness are expected to restrict industry growth.
