Abstracts

The global Hospital Hyperbaric Oxygen Therapy System market size is expected to reach \$ 7192 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

In 2025, global production of hospital hyperbaric oxygen therapy systems reached 3,284 units, with an average selling price of USD 1,460,000 per unit. A hospital hyperbaric oxygen therapy system is a specialized medical device that delivers pure or high-concentration oxygen at pressures higher than atmospheric levels within a sealed pressure chamber, thereby increasing blood oxygen partial pressure and enhancing tissue oxygenation and repair. These systems typically consist of a pressure-rated chamber, gas supply and regulation systems, monitoring and control units, and comprehensive safety mechanisms. They play a critical therapeutic role in clinical applications such as carbon monoxide poisoning, radiation injuries, refractory wounds, diabetic foot ulcers, neurological disorders, and critical rehabilitation, making them a key specialty asset for tertiary hospitals and regional medical centers.

At present, the hospital hyperbaric oxygen therapy system market is characterized by steadily rising demand, high entry barriers, and strong regulatory oversight. Demand is primarily driven by hospital specialty development, advances in rehabilitation medicine, and the strengthening of emergency and poisoning treatment systems. From a market perspective, procurement is dominated by public hospitals, featuring long decision cycles and stringent technical and safety standards, requiring manufacturers to possess capabilities in pressure vessel engineering, medical device certification, and long-term after-sales service. Development trends point toward multi-chamber configurations, larger capacity systems, intelligent control, and enhanced safety redundancy, alongside deeper integration with intensive care, rehabilitation medicine, and multidisciplinary treatment models. Market consensus suggests that despite high upfront investment and long replacement cycles, accelerating population aging, rising chronic disease and

rehabilitation needs, and sustained reinforcement of public health emergency systems will support stable, long-term demand for hospital hyperbaric oxygen therapy systems.

This report studies the global Hospital Hyperbaric Oxygen Therapy System production, demand, key manufacturers, and key regions.
