Abstracts

The global Hospital Injectable Drugs market size is expected to reach \$ 65370 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Injectables refer to drug delivery system which acts as an alternative to oral drugs. As injectables are rapidly inserted into the human body using a syringe, they bypass the first-pass metabolism. In tablet form, some of the drugs become ineffective as they get dismantled in the stomach owing to the digestive enzymes. Generic injectables are pharmaceutical drugs that are bio-equivalent of a branded injectable in terms of dosage, strength, performance, intended use, side-effects and route of administration.

In 2019, North America held the main share in global hospital injectable drugs market, with the proportion of 35%, Europe followed loosely, at the proportion of 33%.

Hospira (Pfizer Inc.) occupied the biggest global hospital injectable drugs market share (13%), Fresenius Kabi followed closely at the proportion of 13%, Baxter and Sichuan Kelun Pharmaceutical also played a vital role in the market.
