According to our (Global Info Research) latest study, the global Host Cell Proteins (HCPs) Analysis market size was valued at US\$ 262 million in 2025 and is forecast to a readjusted size of US\$ 437 million by 2032 with a CAGR of 7.6% during review period.

Host cell proteins (HCPs) are an inevitable impurity of biopharmaceuticals, regardless of whether they are produced by recombinant fermentation or extracted from natural sources. Even after multiple sophisticated purification steps, HCPs may remain or co-purify. They represent a heterogeneous variety of different proteins that need to be quantified in the drug substance and in intermediates from the downstream purification process. HCP analysis is a test to determine the concentration of host cell proteins in samples from downstream purification and drug substance.
