Abstracts

According to our (Global Info Research) latest study, the global Hot Air Steriliser market size was valued at US\$ 307 million in 2025 and is forecast to a readjusted size of US\$ 402 million by 2032 with a CAGR of 3.9% during review period.

In 2025, global hot air sterilizer production reached approximately 230 k units, the average price is 1300 usd/unit. Hot air sterilizer is a kind of equipment which uses high temperature dry air to sterilize articles. It can effectively kill bacteria, viruses and other microorganisms by circulating hot air to make the articles reach a specific high temperature and maintain it for a certain time, and can be used to remove pyrogens (pyrogens are usually some metabolites produced by microorganisms, such as endotoxin, whose chemical nature is complex and can cause reactions such as fever; dry heat sterilization destroys these substances by high temperature oxidation).

The annual production capacity of a single hot air sterilizer production line is typically 8,000-10,000 units per year, with a gross profit margin of around 28%.
