The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Hot Bimetallic Strip refers to a composite strip material that is firmly bonded together by two (or more) metal or alloy component layers with different thermal expansion coefficients. The alloy layer with a larger expansion coefficient is called the active layer, and the alloy layer with a smaller expansion coefficient is called the passive layer. An intermediate layer can be added between the active layer and the passive layer to adjust the resistance. When the ambient temperature changes, due to the active layer The expansion coefficient is different from that of the passive layer, resulting in bending or rotation.
