## Abstracts

According to our (Global Info Research) latest study, the global Hot-coiled Spring market size was valued at US\$ 926 million in 2025 and is forecast to a readjusted size of US\$ 1294 million by 2032 with a CAGR of 4.9% during review period.

In 2025, global sales volume of Hot-coiled Spring was approximately 45 million units, with an average market price of around USD 20 per unit. Prices may vary significantly depending on product specifications, while the gross margin of major manufacturers was generally in the range of 22%–38%. Hot-coiled Spring refers to a type of large heavy-duty spring manufactured through a hot coiling process. It is typically made from spring steel round bars, rods, or large-diameter steel wire, and produced through heating, coiling, quenching and tempering, shot peening, end grinding, and surface anti-corrosion treatment. Compared with cold-coiled springs, Hot-coiled Spring is more suitable for large wire diameters, large dimensions, high loads, and high-impact working conditions, featuring strong load-bearing capacity, high fatigue resistance requirements, and long service life. Its upstream supply chain mainly includes spring steel round bars, rods, large-diameter steel wire, alloy steel materials, as well as heating furnaces, spring coiling machines, quenching and tempering equipment, shot peening equipment, grinding equipment, and anti-corrosion coating materials. Downstream applications are mainly concentrated in automotive, rail transit, marine, aerospace, and other heavy industrial equipment sectors, where the product is used in key components such as suspension, vibration damping, support, buffering, and reset systems.
