## Abstracts

The global Hot Half Systems market size is expected to reach \$ 2168 million by 2032, rising at a market growth of 5.1% CAGR during the forecast period (2026-2032). Hot Half Systems are the core functional modules in injection molds responsible for heating, distributing, and managing the temperature of molten plastic runners. They consist of a hot runner plate, nozzles, heaters, temperature controllers, manifolds, sensors, and an upper mold structure. Typical parameters include: heating temperature 120-350°C, temperature control accuracy ±0.5°C, number of nozzles 2-128, and system pressure up to 2000-2500 bar. They are compatible with various resins such as PP, PE, ABS, PC, PA, POM, and LCP. Through precise temperature control and uniform flow distribution, hot half systems achieve runnerless molding, reduce material waste, improve fill balance, shorten molding cycles, and significantly improve product consistency, serving as the 'hot-side brain' of high-precision injection molding production lines. The product has an average price of approximately US\$28,000-35,000 per unit, a gross profit margin of approximately 45-55%, and global sales of approximately 53,000 units.

The hot runner system industry chain consists of upstream components such as high-temperature alloy steel, heaters (150-800W), thermocouples, and 4-96 channel temperature controllers; the midstream comprises hot runner and hot runner integrators, responsible for the overall design of nozzles, manifolds, valve pins, and temperature control systems; and the downstream covers high-precision injection molding industries such as automotive, medical, packaging, and electronics. With the increasing prevalence of multi-cavity high-speed molds, rising material costs, and the growing application of lightweight and recyclable materials, hot runner systems are evolving from tools for 'saving runner material' to core process platforms for 'improving consistency and efficiency.' Future development will focus on intelligent temperature control, runner balancing algorithms, online monitoring, and high-wear-resistant materials, leading to

continued increases in industry concentration and technological barriers. This report studies the global Hot Half Systems production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Hot Half Systems and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year.
