According to our (Global Info Research) latest study, the global Hot Melt Extrusion Granulator market size was valued at US\$ 3207 million in 2025 and is forecast to a readjusted size of US\$ 4586 million by 2032 with a CAGR of 5.3% during review period.

Extrusion is the process of changing the physical properties of a substance by forcing it through an orifice or die under controlled conditions. For example, a rotating screw forces feed material forward toward the die, where the material is softened by frictional heat generated by the barrel wall. The feed material arrives at the end of the screw in a viscous state and can then be forced through an orifice (or die) and molded into the desired shape.
