The global Hot Metal Forming Lubricants market size is expected to reach \$ 252.6 million by 2029, rising at a market growth of 8.1% CAGR during the forecast period (2023-2029).

Hot metal forming lubricants are used to reduce friction and wear during the forming process of hot metal components. They are applied to the surface of the metal to create a thin film that separates the tooling from the workpiece and helps to prevent the formation of defects such as scoring, scratching, and galling. The choice of lubricant depends on the specific application, the type of metal being formed, and the operating conditions.

This report studies the global Hot Metal Forming Lubricants production, demand, key manufacturers, and key regions.
