According to our (Global Info Research) latest study, the global Hot Retreaded Automotive Tires market size was valued at US\$ 536 million in 2025 and is forecast to a readjusted size of US\$ 665 million by 2032 with a CAGR of 3.1% during review period.

Hot Retreaded Automotive Tires refers to the remanufacturing process of using a reusable tire carcass that has been inspected, ground, and repaired as a base, adding uncured rubber to the tread area, and then placing it in a rigid mold with a specific tread pattern for heating and vulcanization. This process allows the new tread and the old carcass to re-bond, forming a reusable tire. The process is similar to that of new tire vulcanization, resulting in better appearance consistency, tread pattern forming precision, and overall integrity. It is used in truck and bus tires, and light truck/SUV tires. The upstream of the industry chain mainly includes retreadable tire carcasses, natural rubber, synthetic rubber, carbon black, steel wire, vulcanizing agents, accelerators, antioxidants, tread compounds, rubber formulations, testing equipment, grinding equipment, extrusion equipment, molds, and vulcanizing presses. The midstream involves tire carcass inspection, grinding, repair, rubber coating, molding vulcanization, dynamic balancing, and final inspection. The downstream mainly serves logistics fleets, bus companies, and freight and cold chain enterprises. The gross profit margin is approximately 20%–35%.
