## Abstracts

The global Hot Rolled Pickled and Oiled (HRPO) Steel market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

**Demand from the automotive industry:** Hot-rolled, pickled and oiled steel is widely used in the automotive industry and is mainly used to produce body panels, automotive parts, etc. With the increase in automobile production and consumers' higher requirements for automobile quality, the demand for hot-rolled pickled and oiled steel is also increasing.

**Construction industry needs:** Hot-rolled pickled and oiled steel also has important applications in the construction industry, such as for the production of steel structures, bridges, construction steel, etc. With the acceleration of urbanization and the continuous advancement of infrastructure construction, the demand for hot-rolled pickled and oiled steel in the construction industry is also growing steadily.

Hot rolled pickled and oiled steel is steel that has been descaled of an oxide film and oiled to help fight corrosion. During the pickling process, hot rolled steel is descaled in a hydrochloric acid bath. The scale-free surface benefits forming, bending, stamping, and painting both in production savings and the quality of the finished part. The pickling and oiling process produces hot rolled steel that is durable and has improved formability while providing a cleaner surface for painting with a limited barrier to rust formation.
