## **Abstracts**

A controller is electronic technology used to control the hot runner temperature but also for motion control pressure, sequence control, mold cooling and other value-added intelligence activities. A hot runner controller can be sold with a hot runner system or as a standalone product and can control a Mold-Masters hot runner system or a competitor's hot runner system.

### **Scope of the Report:**

This report focuses on the Hot Runner Controller in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Hot runner controller is a technology-intensive and high entry barrier industry. At present, in developed countries, the hot runner controller industry is generally at a more advanced level. The world's large enterprises are mainly concentrated in North America, Europe and Korea. Meanwhile, foreign companies have more advanced equipment, strong R & D capability, and leading technical level. However, foreign companies' manufacturing cost is relatively higher, compared with Chinese companies. Asia is poised to be the fastest-growing region during the forecast period. The high growth in this market is attributed to the growing geriatric population, growing adoption of hot runner systems. Hot runner systems are displacing legacy cold runner technology driven by an increased need for productivity, efficiency, automation and higher part quality. Although growing, hot runner penetration levels in emerging markets remain well below the penetration levels seen in developed economies. The worldwide market for Hot Runner Controller is expected to grow at a CAGR of roughly 8.2% over the next five years, will reach 770 million US\$ in 2023, from 480

million US\$ in 2017, according to a new GIR (Global Info Research) study.
