## Abstracts

The global Hot Tire Retreading Service market size is expected to reach \$ 533 million by 2032, rising at a market growth of 2.1% CAGR during the forecast period (2026-2032).

Hot Tire Retreading is a circular economy service that uses specialized processes to peel off, repair, and bond new tread rubber to worn but structurally intact old tires (mainly commercial vehicle, aviation, or construction machinery tires), followed by high-temperature vulcanization to restore them to near-new tire performance. This service significantly extends tire life, reduces transportation and operating costs, and decreases rubber waste and carbon emissions, making it an important component of green transportation and sustainable industrial practices.
