A hotel automatic revolving door is a type of entrance that consists of a rotating circular door that allows people to enter and exit a building without having to physically push or pull the door open. These doors are typically powered by an electric motor and are equipped with sensors to detect the presence of people approaching the door. The revolving motion of the door helps to maintain a consistent indoor temperature by minimizing the exchange of air between the interior and exterior of the building. Additionally, automatic revolving doors provide a touchless entry experience, making them a convenient and hygienic option for hotel entrances.
