CRS systems are used in the hospitality industry, especially in hotel management, to manage room rates and availability and to share this information across various distribution channels such as online travel agencies and GDSs. When a reservation is made or prices are changed, CRS adjusts hotel rates and availability across all your channels accordingly. CRS also allows different users, such as call center representatives or remote booking agents, to create and modify bookings in one central location. A CRS is your central source of booking data and is usually included or at least seamlessly integrated into your booking engine and channel manager to ensure that hotel rooms are not overbooked across different channels. Once a hotel room is booked on your hotel website, the CRS shares that information with your property management system and pushes updated hotel booking data to your website and third-party channels like GDS or OTAs.
