## Abstracts

The global Housed Direct Drive Torque Motor market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Housed torque motors are specifically designed to deliver high torque output, making them suitable for applications that require powerful rotational motion. Industries such as robotics, machine tools, packaging, and automation systems often demand high torque capabilities, driving the demand for framed torque motors. Framed torque motors offer excellent control over rotational motion, enabling precise and accurate positioning. They provide high torque-to-inertia ratios and low cogging, resulting in smooth operation and enhanced control performance. This makes them ideal for applications that require precise motion control, such as CNC machines, robotics, and rotary tables.

A housed direct drive torque motor, also known simply as a direct drive torque motor, is a type of electric motor that directly drives a load without the need for additional mechanical transmission elements such as gears or belts. These motors are designed to deliver high torque directly to the driven system, eliminating the need for additional components that can introduce backlash, wear, and inefficiencies.
