According to our (Global Info Research) latest study, the global Housed Torque Motor market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A housed torque motor, also known as a framed torque motor or enclosed torque motor, is an electric motor designed specifically to deliver high torque output. Unlike frameless torque motors, which lack an external frame or housing, framed torque motors are complete units that include the motor, stator, rotor, and an external protective frame or housing.

Housed torque motors are specifically designed to deliver high torque output, making them suitable for applications that require powerful rotational motion. Industries such as robotics, machine tools, packaging, and automation systems often demand high torque capabilities, driving the demand for framed torque motors. Framed torque motors offer excellent control over rotational motion, enabling precise and accurate positioning. They provide high torque-to-inertia ratios and low cogging, resulting in smooth operation and enhanced control performance. This makes them ideal for applications that require precise motion control, such as CNC machines, robotics, and rotary tables.
