A household canned motor pump is a type of pump that combines a motor and a pump into a single, sealed unit. The motor's rotor and stator are enclosed in a thin-walled, non-magnetic, corrosion-resistant can (shielding can). When the motor is powered, the rotor rotates and drives the impeller. The impeller then accelerates the liquid (such as water) and transfers it from the inlet to the outlet of the pump through centrifugal force. For example, in a home hot water circulation system, the pump takes in the water near the water heater and pumps it through the pipes to the faucets or other end-use points.
