Abstracts

The global Household Electric Iron market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Lithium-ion battery copper foil, as the carrier and current collector of the negative electrode of the battery, is one of the most basic raw materials for the battery. The main function of the lithium-ion battery current collector is to use the metal foil to gather the current generated by the active materials of the battery to form a larger current output. Lithium-ion battery copper foil is not only the carrier of negative electrode active materials in the battery, but also the collector and conductor of negative electrode electrons, so it is required to have good consistency, conductivity, flexibility and corrosion resistance. Lithium-ion battery copper foil requires that the surface should be clean, smooth, and uniform in color, without oxidative discoloration, scratches, spots, wrinkles, indentations, fingerprints, dust, grease, salt, copper powder, stains, etc. Foreign matter that affects processing and use, its edges are neat, without gaps, tears, folds, and wavy edges.
