Abstracts

The global Household Filtered Water Tap market size is expected to reach \$ 1212 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

A Household Filtered Water Tap is a terminal faucet solution that delivers separated streams of regular tap water and filtered water (or a dedicated filtered outlet), typically working with an under-sink cartridge or compact filtration module. It is designed to improve the taste and baseline quality of drinking/cooking water while preserving high-flow unfiltered water for daily washing. The value proposition is centered on an integrated form factor, consistent user experience, and standardized cartridge replacement—rather than being a clip-on faucet filter or a whole-house system. In 2025, Global Household Filtered Water Tap sales is estimated at 18.0 million units, with an average ex-works price of 45 US\$/unit; global capacity is about 30.0 million units/year, with a gross margin range of 22%–38%.

Upstream includes faucet metals and finishing, cartridges/valves and seals, and filter media/cartridges; midstream covers filtered-tap design/manufacturing and compatibility with under-sink filter modules; downstream demand is fulfilled via kitchen & bath showrooms, appliance channels, and e-commerce for new installations and replacement in households.
