According to our (Global Info Research) latest study, the global Household Freezing Point IPL Hair Removal Device market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

The principle of the hair removal device is to use IPL strong pulse light to target the melanin in the hair follicles and hair shafts. When melanin selectively absorbs light energy, the local temperature rises sharply, and the hair follicle tissue will be carbonized and destroyed, thus achieving the purpose of hair removal. Moreover, the thermal damage of hair removal can be limited to the target tissue, that is, the hair follicles containing melanin, so it will not cause damage to surrounding tissues.
