Abstracts

The global Household Freezing Point IPL Hair Removal Device market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The principle of the hair removal device is to use IPL strong pulse light to target the melanin in the hair follicles and hair shafts. When melanin selectively absorbs light energy, the local temperature rises sharply, and the hair follicle tissue will be carbonized and destroyed, thus achieving the purpose of hair removal. Moreover, the thermal damage of hair removal can be limited to the target tissue, that is, the hair follicles containing melanin, so it will not cause damage to surrounding tissues.
