Abstracts

Small generator sets refer to power generation equipment that can convert mechanical energy or other renewable energy into electrical energy. Generally, our common generator sets are usually driven by steam turbines, water turbines, gasoline engines, diesel engines and other engines, and renewable new energy. A small generating set is mainly composed of an engine (providing kinetic energy), a generator (generating current), and a control system. The excitation mode of the brush-excited generator is the separate excitation type, and the excitation mode of the brushless excitation generator is the self-excited type.
