Household Total Heat Exchanger is an energy-efficient ventilation system used in residential buildings. It exchanges heat and humidity between incoming and outgoing air streams, transferring thermal energy from stale air to fresh air to maintain indoor comfort. The system typically includes a heat exchanger core, fans, filters, and controls. It enhances energy efficiency by recovering lost energy during ventilation, reducing reliance on heating and cooling systems. Additionally, it improves indoor air quality by introducing fresh air and removing pollutants and excess humidity. Overall, a household total heat exchanger provides energy-efficient ventilation and improves indoor comfort and air quality.
