According to our (Global Info Research) latest study, the global HPC Rental Service market size was valued at US$ 42200 million in 2025 and is forecast to a readjusted size of US$ 64040 million by 2032 with a CAGR of 6.2% during review period.

HPC rental service, namely High-Performance Computing (HPC) rental service, is a way to provide efficient, reliable, flexible and secure computing resources and services. HPC rental service means that users obtain the right to use high-performance computing clusters or cloud services through leasing to meet their needs in large-scale data processing, complex computing simulation, scientific research, etc. This service model allows users to use computing resources on demand without having to purchase and maintain expensive hardware equipment by themselves, thereby reducing usage costs and improving resource utilization efficiency.

In recent years, with the growing demand for high-performance computing in scientific research, industry, commerce and other fields, the HPC rental service market has continued to grow. The rapid development of technologies such as cloud computing, big data, and artificial intelligence has provided more possibilities for HPC rental services. The integrated application of these technologies has promoted the widespread application of HPC services in data processing, simulation, big data analysis and other fields. HPC rental service providers continue to launch new technologies and new products to meet the growing computing needs of users. For example, companies such as NVIDIA have strong technical strength and market share in the HPC field, and have promoted the development of the HPC rental service market by providing high-performance GPU solutions. With the rapid development of AI technology, especially the rise of generative artificial intelligence (such as ChatGPT), the demand for computing power has shown an exponential growth, which has further promoted the
