High Pressure Processing (HPP) presses are used in the food industry to apply high levels of hydrostatic pressure to food products. This process helps in preserving freshness and extending shelf life without the use of heat or chemicals. HPP presses work by subjecting packaged food products to pressures typically between 100 to 800 MPa (megapascals) for a few seconds to several minutes. This high pressure is effective in deactivating pathogens, enzymes, and spoilage organisms, thereby maintaining the quality and nutritional content of the food.
